The Rise of Investor-State Arbitration Taylor St John,2018-03-01 Today, investor-state arbitration embodies the worst fears of those concerned about runaway globalization - a far cry from its framers' intentions. Why did governments create a special legal system in which foreign investors can bring cases directly against states? This book takes readers through the key decisions that created investor-state arbitration, drawing on internal documents from several governments and extensive interviews to illustrate the politics behind this new legal system. The corporations and law firms that dominate investor-state arbitration today were not present at its creation. In fact, there was almost no lobbying from investors. Nor did powerful states have a strong preference for it. Nor was it created because there was evidence that it facilitates investment - there was no such evidence. International officials with peacebuilding and development aims drove the rise of investor-state arbitration. This book puts forward a new historical institutionalist explanation to illuminate how the actions of these officials kicked off a process of gradual institutional development. While these officials anticipated many developments, including an enormous caseload from investment treaties, over time this institutional framework they created has been put to new purposes by different actors. Institutions do not determine the purposes to which they may be put, and this book's analysis illustrates how unintended consequences emerge and why institutions persist regardless.

Combinatorial properties of ladders, generalised Pont-Neuf and caterpillar diagrams in the space of coloured open Jacobi diagrams Frank Ditsche,2016 This doctoral thesis is a contribution to the analysis of the combinatorics of arbitrarily coloured open Jacobi diagrams and their relationship to Vassiliev invariants. We examine J. Kneissler's five ladder relations and state them in a much more precise way. We also analyse their role in the space of colored open Jacobi diagrams. Then, we establish a sort of machinery - a language together with a toolbox of lemmata, theorems and definitions to build, manipulate and analyse coloured open Jacobi diagrams. With this, we examine the role of generalised Pont-Neuf diagrams and caterpillar diagrams. Lastly we transfer this to the uncolored case, which allows us to show that the space of open Jacobi diagrams up to first Betti number five is already contained in the module of caterpillar diagrams, considered as a module of a certain subset of Vogels' algebra. This means that Vassiliev invariants associated to these degrees do not detect knot orientation.

Field Recordings of Black Singers and Musicians ,2018-06-28 Traditional African musical forms have long been accepted as fundamental to the emergence of blues and jazz. Yet there has been little effort at compiling recorded evidence to document their development. This discography brings together hundreds of recordings that trace in detail the evolution of the African American musical experience, from early wax cylinder recordings made in West Africa to voodoo rituals from the Carribean Basin to the songs of former slaves in the American South.
