**Gloom's Sprout of Love** Felix Bongjoh,2018-12-29 Most of the poems herein dwell on light and shade, on gleam and gloom, but are also, in general, inspirational, reflecting life in a hilly countryside, its main local color. The first part of book reflects life around the Lake Nyos area just before and after the Lake Nyos explosion in August 1986. One of the main themes running through most of the poems is that which infers the light and love which ultimately grow from gloom. Gloom's Sprout of Love, Felix Bongjoh's eighth book of poetry take up themes of passion and compassion he has also traditionally treated in his earlier seven works, namely: (i)Chorus on a Bridge; (ii) Broken Gloss of Bliss; (iii) Nightfall at Dawn; (iv)When Dusk Hoots; (v) Weeds of Jewelry; (vi) Season of Flowers; and (vii) The Ineluctable Spin.

**FAMILIAR STRANGER** Anne Wickett Cross,2014-12-05 Things like this do not happen to people like me. It couldn't possibly be Michael--he died four years ago. The world of Karen Benét, a Silicon Valley executive, is turned upside down when she runs into the stranger-who-has-to-be-Michael. Although Karen values transparency, she is suddenly caught up in clandestine meetings and secrets kept from friends and associates. As Karen and Michael struggle to protect the people they care about, their duplicity is putting those very relationships at risk. When the lie is so big, will the truth set them free?

Hydrogen Powered Transportation Dr. Ayfer Veziroglu,2017-02-28 The current status of fossil fuel and alternative energy is a hot topic of today. Many different sides have many different opinions on the transition strategy that will work best as fossil fuel reserves slowly diminish. Seeing the light at the end of the tunnel for fossil fuels allows us to begin envisioning the role of various alternative fuels to replace these energy sources. Hydrogen fits into this transition mostly by replacing oil in

the transportation sector as the main energy carrier. Natural gas and biofuels seem to be the best short-term solution, but after 2050, hydrogen transportation must become the norm as we move into a sustainable energy sector by 2100. Fuel-cell vehicles will be able to run off hydrogen more efficiently and be far cleaner than conventional gas-powered vehicles. As production of fossil fuels slows and proven reserves fall, prices will rise and alternative sources will become economically competitive with fossil fuels. Nuclear, geothermal, wind, PV, and wave energy will all be needed to provide for the total global energy demands. A hydrogen platform will also be developed through this century for the transportation sector. Hydrogen will serve as an energy carrier for vehicles and will be used as a form of chemical storage for energy in stationary applications, produced most likely by off-peak excess power. Based on the above information, all countries in the world can be analyzed to assess their potential to become early adopters for hydrogen energy. Even though a basic statistical approach might not provide very accurate results, it provides an insight on early adopters and the status of countries in terms of several commonly measured properties.

Wilstonegreen William Craig,2013-02-15 Madness is for the popular, those who have people around to notice it. Others will suffer alone, their crimes true crimes with no excuses, their behaviour; unacceptable, their rooms are cells and their minds echo the trot, trot, trot of deformed wild horses. They are monsters in the making. They are headlines waiting to happen and they are everywhere.

The international cast of contributors particularly highlights the interplay between law and research across countries — with lessons for all.” Steven D. Penrod, Distinguished Professor, John Jay College of Criminal Justice “At an age where we are relying more than ever on facial identification to ensure public safety, this volume represents an important milestone in ensuring our decisions are informed by the latest developments in technology and science. International experts provide practitioners with an exhaustive review of the tools needed to identify and investigate cases relying on facial identification, be they terror suspects or victims of disaster. What is unique about this book is that experts are encouraged to learn from mistakes made in the past and to equip themselves with theory and science to enable them to best use identification evidence to avoid miscarriages of justice. An outstanding contribution to the field.” Amina Memon, Professor of Psychology Royal Holloway, University of London Forensic Facial Identification provides an up-to-date set of best practices for professionals using eyewitness identification to solve crimes of all kinds. The book brings together a prominent group of contributors to discuss the latest scientific and technical advancements and their implications for practice. The contributors review current procedures for various facial identification methods and discuss their use and reliability. The chapters examine traditional forms of eyewitness identification, such as mugshots and line-ups, but also delve into newer technologies, such as facial identification using CCTV images and computerized automatic face recognition systems. Detailed case studies help put the latest research and technology in the proper legal context.
