Remote Sensing Digital Image Analysis John A. Richards,2013-04-17 With the widespread availability of satellite and aircraft remote sensing image data in digital form, and the ready access most remote sensing practitioners have to computing systems for image interpretation, there is a need to draw together the range of digital image processing procedures and methodologies commonly used in this field into a single treatment. It is the intention of this book to provide such a function, at a level meaningful to the non-specialist digital image analyst, but in sufficient detail that algorithm limitations, alternative procedures and current trends can be appreciated. Often the applications specialist in remote sensing wishing to make use of digital processing procedures has had to depend upon either the mathematically detailed treatments of image processing found in the electrical engineering and computer science literature, or the sometimes necessarily superficial treatments given in general texts on remote sensing. This book seeks to redress that situation. Both image enhancement and classification techniques are covered making the material relevant in those applications in which photointerpretation is used for information extraction and in those wherein information is obtained by classification.

improvements in this important subject.

Medical Image Watermarking Amit Kumar Singh,Basant Kumar,Ghanshyam Singh,Anand Mohan,2017-08-11 This book presents medical image watermarking techniques and algorithms for telemedicine and other emerging applications. This book emphasizes on medical image watermarking to ensure the authenticity of transmitted medical information. It begins with an introduction of digital watermarking, important characteristics, novel applications, different watermarking attacks and standard benchmark tools. This book also covers spatial and transform domain medical image watermarking techniques and their merits and limitations. The authors have developed improved/novel watermarking techniques for telemedicine applications that offer higher robustness, better perceptual quality and increased embedding capacity and secure watermark. The suggested methods may find potential applications in the prevention of patient identity theft and health data management issues which is a growing concern in telemedicine applications. This book provides a sound platform for understanding the medical image watermarking paradigm for researchers in the field and advanced-level students. Industry professionals working in this field, as well as other emerging applications demanding robust and secure watermarking will find this book useful as a reference.

Canadian Cinema in the New Millennium Lee Carruthers,Charles Tepperman,2023-01-15 At the turn of the millennium Canadian cinema appeared to have reached an apex of aesthetic and commercial transformation. Domestic filmmaking has since declined in visibility: the sense of celebrity once associated with independent directors has diminished, projects garner less critical attention, and concepts that made late-twentieth-century Canadian film legible have been reconsidered or displaced. Canadian Cinema in the New Millennium examines this dramatic transformation and revitalizes our engagement with Canadian cinema in the contemporary moment, presenting focused case studies of films and filmmakers and contextual studies of Canadian film policy, labour, and film festivals. Contributors trace key developments since 2000, including the

renouveau or Quebec New Wave, Indigenous filmmaking, i-docs, and diasporic experimental filmmaking. Reflecting the way film in Canada mediates multiple cultures, forging new affinities among anglophone, francophone, and Indigenous-language examples, this book engages familiar figures, such as Denis Villeneuve, Xavier Dolan, Sarah Polley, and Guy Maddin, in the same breath as small-budget independent films, documentaries, and experimental works that have emerged in the Canadian scene. Fuelled by close attention to the films themselves and a desire to develop new scholarly approaches, Canadian Cinema in the New Millennium models a renewed commitment to keeping the conversation about Canadian cinema vibrant and alive.

Research Anthology on Securing Medical Systems and Records Management Association, Information Resources,2022-06-03 With the influx of internet and mobile technology usage, many medical institutions—from doctor's offices to hospitals—have implemented new online technologies for the storage and access of health data as well as the monitoring of patient health. Telehealth was particularly useful during the COVID-19 pandemic, which monumentally increased its everyday usage. However, this transition of health data has increased privacy risks, and cyber criminals and hackers may have increased access to patient personal data. Medical staff and administrations must remain up to date on the new technologies and methods in securing these medical systems and records. The Research Anthology on Securing Medical Systems and Records discusses the emerging challenges in healthcare privacy as well as the technologies, methodologies, and emerging research in securing medical systems and enhancing patient privacy. It provides information on the implementation of these technologies as well as new avenues of medical security research. Covering topics such as biomedical imaging, internet of things, and watermarking, this major reference work is a comprehensive resource for security analysts, data scientists, hospital administrators, leaders in healthcare, medical professionals, health information managers, medical professionals, mobile application developers, security professionals, technicians, students, libraries, researchers, and academicians.

"Prints in Translation, 1450?750 " EdwardH. Wouk,2017-07-05 Printed artworks were often ephemeral, but in the early modern period, exchanges between print and other media were common, setting off chain reactions of images and objects that endured. Paintings, sculpture, decorative arts, musical or scientific instruments, and armor exerted their own influence on prints, while prints provided artists with paper veneers, templates, and sources of adaptable images. This interdisciplinary collection unites scholars from different fields of art history who elucidate the agency of prints on more traditionally valued media, and vice-versa. Contributors explore how, after translations across traditional geographic, temporal, and material boundaries, original 'meanings' may be lost, reconfigured, or subverted in surprising ways, whether a Netherlandish motif graces a cabinet in Italy or the print itself, colored or copied, is integrated into the calligraphic scheme of a Persian royal album. These intertwined relationships yield unexpected yet surprisingly prevalent modes of perception. Andrea Mantegna's 1470/1500 Battle of the Sea Gods, an engraving that emulates the properties of sculpted relief, was in

fact reborn as relief sculpture, and fabrics based on print designs were reapplied to prints, returning color and tactility to the very objects from which the derived. Together, the essays in this volume witness a methodological shift in the study of print, from examining the printed image as an index of an absent invention in another medium - a painting, sculpture, or drawing - to considering its role as a generative, active agent driving modes of invention and perception far beyond the locus of its production.

Image: An Integrated Model to Assess the Greenhouse Effect J. Rotmans,2012-12-06 This book is the result of a research project entitled Reference function for Global Air Pollution/C0 initiated by RIVM. It deals with the description 2 of a computer simulation model of the greenhouse effect. This model, IMAGE, tries to capture the fundamentals of the complex problem of climate change in a simplified way. The model is a multidisciplinary product and is based on knowledge from disciplines as economics, atmospheric chemistry, marine and terrestrial biogeochemistry, ecology, climatology, and glaciology. This book might be of interest for anyone working in the broad field of climate change. Furthermore, it can be useful for model builders, simulation experts, mathematicians etc. A PC version of the model will become avail able free of charge. Requests can be sent to the author. Although being the only author of this book, I could never have written it without the help of many other people. First of all I would like to thank Koos Vrieze, originally a colleague at RIVM, later my professor. Without his inspiring attitude I would have never finished this thesis. I am also very grateful to RIVM for giving me the opportunity to write this thesis. lowe many thanks to Hans de Boois and Rob Swart for their support and assis tance during the research. Furthermore, I would like to thank my trainees who have substantially contributed to the contents of this book.
