Hair Susan J. Vincent, 2018-10-04 Bobs, beards, blondes and beyond, Hair takes us on a lavishly illustrated journey into the world of this remarkable substance and our complicated and fascinating relationship with it. Taking the key things we do to it in turn, this book captures its importance in the past and into the present: to individuals and society, for health and hygiene, in social and political challenge, in creating ideals of masculinity and womanliness, in being a vehicle for gossip, secrets and sex. Using art, film, personal diaries, newspapers, texts and images, Susan J. Vincent unearths the stories we have told about hair and why they are important. From ginger jibes in the seventeenth century to bobbed-hair suicides in the 1920s, from hippies to Roundheads, from bearded women to smooth metrosexuals, Hair shows the significance of the stuff we nurture, remove, style and tend. You will never take it for granted again.

World Religions and Democracy Larry Diamond, Marc F. Plattner, Philip J. Costopoulos, 2005-03-02 Can religion be compatible with liberal democracy? *World Religions and Democracy* brings together insights from renowned scholars and world leaders in a provocative and timely discussion of religions' role in the success or failure of democracy. An essay by Alfred Stepan outlines the concept of twin tolerations and differentiation, and creates a template that can be applied to all of the religion-democracy relationships observed and analyzed throughout the volume. Twin tolerations means that there is a clear distinction and a mutual respect between political authorities and religious leaders and bodies. When true differentiation is accomplished, the religious sector enjoys freedom of activity and the ability to peacefully influence its members but does not wield direct political power. A country's ability to implement the principle of differentiation directly affects the successful development of democracy. Part two focuses on eastern religions—Confucianism, Hinduism, and Buddhism—and includes contributions from Nobel Prize winner Aung San Suu Kyi and His Holiness the Dalai Lama. The third part addresses democracy in relationship to Judaism and the three branches of Christianity—Catholicism, Protestantism, and Eastern Orthodoxy. Sociologist Peter Berger offers a global perspective of Christianity and democracy. The volume's final section discusses what is perhaps the most challenging example of the struggling relationship between religion and democracy today: Islam and the governments of the Muslim nations. Abdou Filali-Ansary, Bernard Lewis, and

others present a comprehensive exploration of Muslim thought and faith in an increasingly secular, modern world. It is in this volatile political and religious climate that solutions are most urgently needed but also most elusive. Contributors: Alfred Stepan, Hahm Chaibong, Francis Fukuyama, Pratap Mehta, His Holiness the Dalai Lama, Aung San Suu Kyi, Hillel Fradkin, Daniel Philpott, Tim Shah, Robert Woodberry, Elizabeth Prodromou, Peter Berger, Abdou Filali-Ansary, Bernard Lewis, Robin Wright, Abdelwahab El-Affendi, Radwan A. Masmoudi, Laith Kubba, Ladan Boroumand, Roya Boroumand.

Agri-Food and Rural Development Terry Marsden, 2017-09-21 The agri-food and rural development world has experienced significant changes in recent years. The evolution towards globalized and highly complex food supply systems has been accompanied by growing competition, reduced state subsidies as well as concerns about quality, output and the environment. At the beginning of the 21st century, the agri-food industry is urgently searching for new solutions. Exploring these recent developments, *Agri-Food and Rural Development* highlights the latest research on understanding and promoting sustainable food systems. Featuring a range of international case studies, it investigates different models of rural development for food production, examines the implications for a sustainable future, analyzes future challenges, and suggests new strategies for future agri-food development in a world fast exceeding its resources. An ambitious new study written by a leading authority in the field, this book offers a vital new perspective on this important debate and is destined to become a landmark text for students, scholars and policy-makers in food studies, agriculture, rural sociology, and geography.

Fashion Writing and Criticism Peter McNeil, Sanda Miller, 2014-10-23 *Fashion Writing and Criticism* provides students

with the tools to critique fashion with skill and style. Explaining the history and theory of criticism, this innovative text demonstrates how the tradition of criticism has developed and how this knowledge can be applied to fashion, enabling students to acquire the methods and proper vocabulary to be active critics themselves. Integrating history and theory, this innovative book explains the development of fashion writing, the theoretical basis on which it sits, and how it might be improved and applied. Through concise snapshot case studies, top international scholars McNeil and Miller analyse fashion excerpts in relation to philosophical ideas and situate them within historical contexts. Case studies include classic examples of fashion writing, such as Diana Vreeland at Harper's Bazaar and Richard Martin on Karl Lagerfeld, as well as contemporary examples such as Suzy Menkes and the blogger Tavi. Accessibly written, *Fashion Writing and Criticism* enables readers to understand, assess and make value judgments about the fascinating and changeable field of fashion. It is an invaluable text for students and researchers alike, studying fashion, journalism, history and media studies.

Computational Geometry, Topology and Physics of Digital Images with Applications James F. Peters, 2019-10-03 This book discusses the computational geometry, topology and physics of digital images and video frame sequences. This trio of computational approaches encompasses the study of shape complexes, optical vortex nerves and proximities embedded in triangulated video frames and single images, while computational geometry focuses on the geometric structures that infuse triangulated visual scenes. The book first addresses the topology of cellular complexes to provide a basis for an introductory study of the computational topology of visual scenes, exploring the fabric, shapes and structures typically found in visual scenes. The book then examines the inherent geometry and topology of visual scenes, and the fine structure of light and light caustics of visual scenes, which bring into play catastrophe theory and the appearance of light caustic folds and cusps. Following on from this, the book introduces optical vortex nerves in triangulated digital images. In this context,

computational physics is synonymous with the study of the fine structure of light choreographed in video frames. This choreography appears as a sequence of snapshots of light reflected and refracted from surface shapes, providing a solid foundation for detecting, analyzing and classifying visual scene shapes.

Food and Animal Welfare Henry Buller, Emma Roe, 2018-05-03 Drawing together the latest research and a range of case studies, Henry Buller and Emma Roe guide readers on a fascinating journey through animal welfare issues 'from farm to fork'. Animal welfare offers a vital lens through which to explore the economies, culture and politics of food. This is the first text to provide a much-needed overview of this strongly debated area of the food industry. Buller and Roe explore how animal welfare is defined, advocated, assessed and implemented by farmers, veterinarians, distributors, and consumers. From the practicalities and limitations of establishing a basic standard of care for livestock, to the ethics of selling welfare as a product in the supermarket, this indispensable book offers empirical insights into a key aspect of the global food system: the lives, deaths, and consumption of animals which are at the core of the food chain. It is a must-read for students and scholars of animal welfare, agro-food studies and human-animal relations in disciplines such as geography, politics, anthropology, and sociology as well as animal behaviour, psychology and veterinary science.

Images Sunil Manghani, 2013 *Images: Critical and Primary Sources* is a major multi-volume work of reference that brings together seminal writings on the image. Taking an interdisciplinary approach, the essays range across the domains of philosophy, history, art, aesthetics, literature, science, anthropology, critical theory and cultural studies. The essays reveal a wide set of perspectives, problematics and approaches, helping to frame a rich, encompassing view of what we can broadly term 'image studies'. The four volumes are arranged thematically, each separately introduced and with the essays structured into specific sections for easy reference. Volume 1: *Understanding Images* establishes conceptual, historical, ideological and philosophical framings for understanding and defining the image; followed in Volume 2: *The Pictorial Turn* with a focus on the most enduring and constitutive question of the image: its relationship to, with and against text and textuality. Volume 3: *Image Theory* offers representative materials covering key theoretical approaches for analyzing, interpreting and critiquing the image. Finally, Volume 4: *Image Cultures* examines a wide range of social and cultural contexts of the image, which covers aspects of visual evidence, image and memory, visual methodologies, scientific imaging and the practical engagement

of image-makers. *Images: Critical and Primary Sources* offers a major scholarly resource for any researchers involved in the study of the image and visual culture.

Nature Inspired Optimization Techniques for Image Processing Applications Jude Hemanth, Valentina Emilia Balas, 2018-09-19 This book provides a platform for exploring nature-inspired optimization techniques in the context of imaging applications. Optimization has become part and parcel of all computational vision applications, and since the amount of data used in these applications is vast, the need for optimization techniques has increased exponentially. These accuracy and complexity are a major area of concern when it comes to practical applications. However, these optimization techniques have not yet been fully explored in the context of imaging applications. By presenting interdisciplinary concepts, ranging from optimization to image processing, the book appeals to a broad readership, while also encouraging budding engineers to pursue and employ innovative nature-inspired techniques for image processing applications.

Images in Law William Pencak, Ms Anne Wagner, 2013-01-28 What does 'the law' look like? While numerous attempts have been made to examine law and legal action in terms of its language, little has yet been written that considers how visual images of the law influence its interpretation and execution in ways not discernible from written texts. This groundbreaking collection focuses on images in law, featuring contributions that show and discuss the perception of the legal universe on a theoretical basis or when dealing with visual semiotics (dress, ceremony, technology, etc.). It also examines 'language in action', analyzing jury instructions, police directives, and how imagery is used in conjunction with contentious social and political issues within a country, such as the image of family in Ireland or the image of racism in France.
