The Art of Identification Rex Ferguson,Melissa M. Littlefield,James Purdon,2021-07-12 Since the mid-nineteenth century, there has been a notable acceleration in the development of the techniques used to confirm identity. From fingerprints to photographs to DNA, we have been rapidly amassing novel means of identification, even as personal, individual identity remains a complex chimera. The Art of Identification examines how such processes are entangled within a wider sphere of cultural identity formation. Against the backdrop of an unstable modernity and the rapid rise and expansion of identificatory techniques, this volume makes the case that identity and identification are mutually imbricated and that our best understanding of both concepts and technologies comes through the interdisciplinary analysis of science, bureaucratic

infrastructures, and cultural artifacts. With contributions from literary critics, cultural historians, scholars of film and new media, a forensic anthropologist, and a human bioarcheologist, this book reflects upon the relationship between the bureaucratic, scientific, and technologically determined techniques of identification and the cultural contexts of art, literature, and screen media. In doing so, it opens the interpretive possibilities surrounding identification and pushes us to think about it as existing within a range of cultural influences that complicate the precise formulation, meaning, and reception of the concept. In addition to the editors, the contributors to this volume include Dorothy Butchard, Patricia E. Chu, Jonathan Finn, Rebecca Gowland, Liv Hausken, Matt Houlbrook, Rob Lederer, Andrew Mangham, Victoria Stewart, and Tim Thompson.

Technology and Agency in International Relations Marijn Hoijtink, Matthias Leese, 2019-04-23 This book responds to a gap in the literature in International Relations (IR) by integrating technology more systematically into analyses of global politics. Technology facilitates, accelerates, automates, and exercises capabilities that are greater than human abilities. And yet, within IR, the role of technology often remains under-studied. Building on insights from science and technology studies (STS), assemblage theory and new materialism, this volume asks how international politics are made possible, knowable, and durable by and through technology. The contributors provide empirically rich and pertinent accounts of a variety of technologies relevant to the discipline, including drones, algorithms, satellite imagery, border management databases, and blockchains. Problematizing various technologically mediated issues, such as secrecy, violence, and questions of how authority and evidence become constituted in international contexts, this book will be of interest to scholars in IR, in particular those who work in the subfields of (critical) security studies, International Political Economy, and Global Governance. Identity and Travel Documents and the Fight Against Terrorism Council of Europe. Committee of Ministers, 2005-01-01 Although the vast majority of persons applying for and using identity and travel documents do so for lawful purposes, they are also used by terrorists, for whom they constitute an important tool. Genuine identity documents in particular, obtained

through lawful procedures, are vital to terrorists' operational success. Recommendation Rec(2005)7 of the Committee of Ministers to member states concerning identity and travel documents and the fight against terrorism therefore aims to ensure the proper, rapid and reliable identification of individuals, in particular as regards the issuing of such documents. It calls on member states to take measures to strengthen the security of identity and travel documents and indicates the appropriate course of action to take when such documents are lost or stolen. The recommendation also contains provisions dealing with proof of identity as well as registration of birth and issuance of birth certificates, which are necessary to obtain identity and travel documents. Finally, the recommendation contains provisions dealing with international co-operation calling for the exchange of information with other member states and with international law enforcement bodies, in particular regarding lost or stolen identity and travel documents, whether issued or blank.

Forensic Face Matching Markus Bindemann, 2021-01-07 In everyday life we identify faces regularly and seemingly with great ease. One might assume this to be a straightforward and highly accurate task. However, we are poor at identifying the faces of unfamiliar people, who we have never met before, despite the fact that many important everyday tasks depend on this. Forensic face matching requires the comparison of two face photographs, of a person who is not known to the observer. This seemingly simple task is critical for a wide range of security tasks, such as person identification at airports and borders, passport issuance and renewal, and criminal identification in police investigations. Despite its ubiquity, face matching is highly prone to error, even under conditions that are designed to maximally facilitate this task. For this reason, face matching has been studied extensively in Psychology, with the bulk of the research conducted since 2010. 'Forensic face Matching' provides readers with a wide-ranging, detailed, and critical overview of facial comparison and face matching, providing insights into its application, efficacy, and limitations in occupational settings, and of current scientific knowledge of this task.

Biometric Security Jiankun Hu, David Chek Ling Ngo, Andrew Beng Jin Teoh, 2015-02-05 Modern biometrics delivers an enhanced level of security by means of a "proof of property". The design and deployment of a biometric system, however, hide many pitfalls, which, when underestimated, can lead to major security weaknesses and privacy threats. Issues of concern include biometric identity theft and privacy invasion because of the strong connection between a user and his identity. This book showcases a collection of comprehensive references on the advances of biometric security technology. It compiles a total of fourteen articles, all contributed by thirty-two eminent researchers in the field, thus providing concise and accessible coverage of not only general issues, but also state-of-the-art solutions. The book is divided into five parts: (1) Biometric Template Protection, which covers cancellable biometrics and parameter management protocol; (2) Biometric Key and Encryption, focusing on biometric key generation and visual biometric cryptography; (3) Biometric Systems Analysis, dealing with biometric system security, and privacy evaluation and assessment; (4) Privacy-Enhanced Biometric Systems,

covering privacy-enhanced biometric system protocol design and implementation; and (5) Other Biometric Security Technologies. The book will be of particular interest to researchers, scholars, graduate students, engineers, practitioners and developers interested in security and privacy-related issues in biometric systems. It will also be attractive to managers of various organizations with strong security needs.

Machine Learning Methods for Signal, Image and Speech Processing M.A. Jabbar,MVV Prasad Kantipudi,Sheng-Lung Peng,Mamun Bin Ibne Reaz,Ana Maria Madureira,2022-09-01 The signal processing (SP) landscape has been enriched by recent advances in artificial intelligence (AI) and machine learning (ML), yielding new tools for signal estimation, classification, prediction, and manipulation. Layered signal representations, nonlinear function approximation and nonlinear signal prediction are now feasible at very large scale in both dimensionality and data size. These are leading to significant performance gains in a variety of long-standing problem domains like speech and Image analysis. As well as providing the ability to construct new classes of nonlinear functions (e.g., fusion, nonlinear filtering). This book will help academics, researchers, developers, graduate and undergraduate students to comprehend complex SP data across a wide range of topical application areas such as social multimedia data collected from social media networks, medical imaging data, data from Covid tests etc. This book focuses on AI utilization in the speech, image, communications and virtual reality domains.

Strategic Issues in Air Transport Ruwantissa Abeyratne,2012-01-03 There are broadly four strategic issues in aviation: safety; security; environmental protection; and sustainability in air transport. These issues will remain for a long time as key considerations in the safe, regular, efficient and economic development of air transport. Within these four broad categories come numerous subjects that require attention of the aviation industry as well as the States. In six chapters, this book engages in detailed discussions on these subjects as they unravelled in events of recent years. The issue of safety is addressed first, following an introduction of the regulatory regime covering the four issues. Within the area of safety, the book covers such areas as safety management systems, safety and aeromedicine, safety and meteorology, the use of airspace,

unmanned aircraft systems and safety oversight audits. In the security area, subjects covered include cyber terrorism, the integrity of travel documents, full body scanners, civil unrest and aviation, the suppression of unlawful acts on board aircraft and the financing of terrorism. The chapter on the environment focuses mainly on climate change - particularly on carbon credits, market based measures, the carbon market and emissions trading schemes and their effect on air transport. Finally, the chapter on sustainability discusses in detail market access along with such issues as slot allocation, open skies, the use of alternative fuels as an economic measure and corporate foresight. The concluding chapter wraps up with a discussion on where air transport is headed.

Digest of United States Practice in International Law 2006 Sally J. Cummins, 2008-01-17 Co-published by Oxford University Press and the International Law Institute, and prepared by the Office of the Legal Adviser at the Department of State, this annual compilation of documents and commentary highlighting significant developments in public and private international law, and is an invaluable resource for practitioners and scholars in the field. Each annual edition compiles excerpts from documents such as treaties, diplomatic notes and correspondence, legal opinion letters, judicial decisions, Senate committee reports and press releases. All of the documents which are excerpted in the Digest are selected by members of the Legal Adviser's Office of the U.S. Department of State, based on their judgments about the significance of the issues, their potential relevance to future situations, and their likely interest to practitioners and scholars. In almost every case, the commentary to each excerpt is accompanied by a citation to the full text.

International and EU Aviation Law Elmar Maria Giemulla, Ludwig Weber, 2011-01-01 This book offers an extraordinary wealth of information, from the ground up, of the law governing and regulating air transport today, with a strong emphasis on international aviation. A team of distinguished authors in the field of aviation law provide a cogent synthesis from which sound legal opinions and strategies of legal action may be confidently built. Among the many topics here in depth are the following: definition and classification of airspace; distinction between civil and state aircraft; air navigation and air traffic control services; airport charges and overflight charges; structure of ICAO; standard-setting functions and audit functions of ICAO; functions of the International Air Transport Association (IATA); policy and effects of deregulation and liberalization of air transport policy; the International Registry for Aircraft Equipment; air carrier liability regimes and claims procedure; measures to combat aviation terrorism, air piracy and sabotage; and the Open Skies Agreements. This publication cites significant legislation and court rulings, including from the United States and the European Union, where far-reaching measures on market access, competition and passenger rights have set trends for other regions of the world. The special case of Latin America has a chapter to itself. At a time when commercial aircraft have been used as lethal weapons for the first time, aviation law finds itself in the front line of responsibility for maintaining global aviation security.
