John Heartfield and the Agitated Image Andrés Mario Zervigón,2012-12-01 Working in Germany between the two world wars, John Heartfield (born Helmut Herzfeld, 1891-1968) developed an innovative method of appropriating and reusing photographs to powerful political effect. As a pioneer of modern photomontage, he sliced up mass media photos with his iconic scissors and then reassembled the fragments into compositions that utterly transformed the meaning of the originals. In *John Heartfield and the Agitated Image*, Andrés Mario Zervigón explores this crucial period in the life and work of a brilliant, radical artist whose desire to disclose the truth obscured by the mainstream press and imperial propaganda made him a de facto prosecutor of Germany's visual culture. Zervigón charts the evolution of Heartfield's photomontage from an act of antiwar resistance into a formalized and widely disseminated political art in the Weimar Republic. Appearing on everything from campaign posters to book covers, the photomonteur's notorious pictures challenged well-worn assumption and correspondingly walked a dangerous tightrope over the political, social, and cultural cauldron that was interwar Germany. Zervigón explains how Heartfield's engagement with montage arose from a broadly-shared dissatisfaction with photography's capacity to represent the modern world. The result was likely the most important combination of avant-garde art and politics in the twentieth century. A rare look at Heartfield's early and middle years as an artist and designer, this book provides a new understanding of photography's role at this critical juncture in history.

Computational Radiology and Imaging Christoph Börgers, Frank Natterer, 1999 The articles collected in this volume are based on lectures given at the IMA Workshop, Computational Radiology and Imaging: Therapy and Diagnostics, March 17-21, 1997. Introductory articles by the editors have been added. The focus is on inverse problems involving electromagnetic radiation and particle beams, with applications to X-ray tomography, nuclear medicine, near infrared imaging, microwave imaging, electron microscopy, and radiation therapy planning. Mathematical and computational tools and models which play important roles in this volume include the X-ray transform and other integral transforms, the linear Boltzmann equation and, for near infrared imaging, its diffusion approximation, iterative methods for large linear and non linear least squares problems, iterative methods for linear feasibility problems, and optimization methods. The volume is intended not only for mathematical scientists and engineers working on these and related problems, but also for non specialists. It contains much introductory expository material, and a large number of references. Many unsolved computational and mathematical problems of substantial practical importance are pointed out.
