*Magnetospheric Imaging — The Image Prime Mission* James L. Burch, 2012-12-06 The Imager for Magnetopause-to-Aurora Global Exploration (IMAGE) is a NASA Explorer mission that is the first space mission dedicated to imaging of the Earth's magnetosphere. IMAGE was launched from Vandenberg AFB into an elliptical polar orbit by a Delta II launch vehicle on March 25, 2000. The two-year prime scientific mission of IMAGE began on May 25, 2000 after instrument commissioning was successfully completed. IMAGE has now been approved for operation until October 1, 2005, and an additional two-year extension is now being considered by NASA. The papers in this volume represent many of the scientific results obtained during the IMAGE prime mission and include some of the early correlative research with ground-based measurements, measurements from other spacecraft such as Cluster II, and relevant theory and modeling programs. All of the reported work is related to the overall IMAGE science objective: How does the magnetosphere respond globally to the changing conditions in the solar wind? IMAGE addresses this question with multi-spectral imaging of most of the important plasma populations of the inner magnetosphere, combined with radio sounding of gradients of total plasma content. The new experimental techniques fall into the following areas: neutral atom imaging (NAI) over an energy range from 10 eV to 500 keV for detection of ionospheric outflow, the plasma sheet, and the ring current; far ultraviolet (FUV) imaging at 121-190 nm for detection of precipitating protons and the global aurora; extreme ultraviolet (EUV) imaging at 30.

*Coming After Oprah* Vicki Abt,Leonard Mustazza,1997 Examines the evolution and cultural significance of these programs, disputing claims that they are nothing more than harmless entertainment. The first half uncovers the mechanics of

the talk show game. The second reveals the web of commercial and political interests that influence the shows' production, as well as describing corporate players and their revenues. The study concludes with suggestions for what we as a culture might do to protect ourselves from deception and misinformation. Paper edition (unseen), \$20.95. *Particle Image Velocimetry* Markus Raffel, Christian E. Willert, Fulvio Scarano, Christian J. Kähler, Steve T. Wereley, Jürgen Kompenhans, 2018-04-03 This immensely practical guide to PIV provides a condensed, yet exhaustive guide to most of the information needed for experiments employing the technique. This second edition has updated chapters on the principles and extra information on microscopic, high-speed and three component measurements as well as a description of advanced evaluation techniques. What's more, the huge increase in the range of possible applications has been taken into account as the chapter describing these applications of the PIV technique has been expanded.

*Earth's Low-Latitude Boundary Layer* Patrick T. Newell, Terry Onsager, 2003-01-10 Published by the American Geophysical Union as part of the Geophysical Monograph Series, Volume 133. We imagine the reader of this preface standing at the AGU bookstall wondering if the tome in hand is worth buying. The answer is "no", except for certain trifling exceptions. Those who wish to learn about the exciting pioneering years of LLBL research should buy the book for Tim Eastman's excellent historical review, our opening chapter. When did the term "LLBL" first enter the field? Eastman will tell you, and much else besides.

*Artificial Intelligence and Other Innovative Computer Applications in the Nuclear Industry* M. Catherine Majumdar, 2012-12-06 This conference brought together experts from 15 countries to discuss application of Artificial Intelligence (AI) techniques to the nuclear industry. It was apparent from the meeting that even those active in the field were surprised at the extent of work and the progress made. There was a strong impression that application of this technology to nuclear power plants is inevitable. The benefits to improved operation, design, and safety are simply too significant to be ignored. This is a much different conclusion than might have been reached a few years ago when the technology was new and people were struggling to understand its significance. We believe that this meeting reflects a major turning point for the technology. It has moved from being a topic understood only by specialists to a situation where users are the most active people in the field. A broad array of innovative work is described from all of the participating countries. The activity in the u.s. is large and diverse. Although there is no nationally focussed policy for AI research in the U.S., many of these activities are reported here. Japan and France have a strong drive to integrate AI technology into their nuclear plants, and this is reflected in these proceedings.
