**Multidisciplinary Aspects of Design** Francesca Zanella, Giampiero Bosoni, Elisabetta Di Stefano, Gioia Laura Iannilli, Giovanni Matteucci, Rita Messori, Raffaella Trocchianesi, 2023-12-30 This open access book gathers the contributions from the Design! OPEN International Conference, held in Parma, Italy in May 2022. The conference explored the multidisciplinary aspects of design starting from its dimensions: objects (design as focused on the object, on its functional and symbolic dimension, and at the same time on the object as a tool for representing cultures), processes (the designer's self-reflective moment which is focused on the analysis and on the definition of processes in various contexts, spanning innovation, social engagement, reflection on emergencies or forecasting), experiences (design as a theoretical and practical strategy aimed at facilitating experiential interactions among people, people and objects or environments), and narratives (making history, representing through different media, archiving, narrating, and exhibiting design). The contributions, which were selected by means of a rigorous international peer-review process, highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaboration among different specialists.

*Understanding by Design* Grant P. Wiggins, Jay McTighe, 2005 What is understanding and how does it differ from knowledge? How can we determine the big ideas worth understanding? Why is understanding an important teaching goal, and how do we know when students have attained it? How can we create a rigorous and engaging curriculum that focuses on understanding and leads to improved student performance in today's high-stakes, standards-based environment? Authors

Grant Wiggins and Jay McTighe answer these and many other questions in this second edition of *Understanding by Design*. Drawing on feedback from thousands of educators around the world who have used the UbD framework since its introduction in 1998, the authors have greatly revised and expanded their original work to guide educators across the K-16 spectrum in the design of curriculum, assessment, and instruction. With an improved UbD Template at its core, the book explains the rationale of backward design and explores in greater depth the meaning of such key ideas as essential questions and transfer tasks. Readers will learn why the familiar coverage- and activity-based approaches to curriculum design fall short, and how a focus on the six facets of understanding can enrich student learning. With an expanded array of practical strategies, tools, and examples from all subject areas, the book demonstrates how the research-based principles of *Understanding by Design* apply to district frameworks as well as to individual units of curriculum. Combining provocative ideas, thoughtful analysis, and tested approaches, this new edition of *Understanding by Design* offers teacher-designers a clear path to the creation of curriculum that ensures better learning and a more stimulating experience for students and teachers alike.

**Technology, Design and the Arts - Opportunities and Challenges** Rae Earnshaw,Susan Liggett,Peter Excell,Daniel Thalmann,2020-06-22 This open access book details the relationship between the artist and their created works, using tools such as information technology, computer environments, and interactive devices, for a range of information sources and application domains. This has produced new kinds of created works which can be viewed, explored, and interacted with, either as an installation or via a virtual environment such as the Internet. These processes generate new dimensions of understanding and experience for both the artist and the public's relationships with the works that are produced. This has raised a variety of interdisciplinary opportunities and issues, and these are examined. The symbiotic relationship between artistic works and the cultural context in which they are produced is reviewed. Technology can provide continuity by making traditional methods and techniques more efficient and effective. It can also provide discontinuity by opening up new perspectives and paradigms. This can generate new ideas, and produce a greater understanding of artistic processes and

how they are implemented in practice. Tools have been used from the earliest times to create and modify artistic works. For example, naturally occurring pigments have been used for cave paintings. What has been created provides insight into the cultural context and social environment at the time of creation. There is an interplay between the goal of the creator, the selection and use of appropriate tools, and the materials and representations chosen. Technology, Design and the Arts - Opportunities and Challenges is relevant for artists and technologists and those engaged in interdisciplinary research and development at the boundaries between these disciplines.

**Proceedings of the 4th International Conference on Language, Art and Cultural Exchange (ICLACE 2023)**

Bootheina Majoul, Guiyun Guan, Nick Groom, 2023-08-28 This is an open access book. The 4th International Conference on Language, Art and Cultural Exchange (ICLACE 2023) will be held on May 19-21, 2023 in Hangzhou, China. Culture includes language, which is a special cultural phenomenon. For culture, most scholars agree that it mainly includes two aspects: material culture and spiritual culture. Specific examples to show cultural phenomena will be of great benefit to our understanding. Some examples of material culture are listed here: Indian women wear saris, Japanese like to eat sashimi, and Chinese like to shake hands when meeting each other. These are various manifestations of material culture in different nations. Language is the mode of transmission of culture. Language is one of the most important ways of thinking and cultural exchange of human beings, which is actually the manifestation of the formation and transmission of culture. Because of thinking, human beings gradually create culture in the continuous social practice, and then spread their national culture to each other in the continuous language exchange. Since ancient times, art and culture have been going hand in hand and

complementing each other. On the one hand, art is an important connotation and component of culture, and the progress of art is the driving force of cultural development. On the other hand, culture is the source and content of art, and the prosperity of culture is the key to improve the level of art. On the other hand, culture is the source and content of art, and the prosperity of culture is the key to improving the level of art. Therefore, whether it is culture or art, it is not only a symbol of an era, a representation of people's life style, but also a guide to the direction of social development. The relationship between language, art and cultural communication is a hot topic for many scholars to study at present. Therefore, an academic conference is set up for authors to discuss related research issues and exchange new ideas, hoping that scholars can burst out more excellent and valuable ideas in this conference. ICLACE 2023 is to bring together innovative academics and industrial experts in the field of Literature, Art and Cultural Exchange research to a common forum. The primary goal of the conference is to provide a platform for scientists, scholars, and engineers from all over the world to present ongoing research activities, fostering the research and business relations and promoting scientific information interchange and cooperation between all the participants.

**Digital Transformation of the Design, Construction and Management Processes of the Built Environment**

Bruno Daniotti,Marco Gianinetto,Stefano Della Torre,2019-12-30 This open access book focuses on the development of methods, interoperable and integrated ICT tools, and survey techniques for optimal management of the building process. The construction sector is facing an increasing demand for major innovations in terms of digital dematerialization and technologies such as the Internet of Things, big data, advanced manufacturing, robotics, 3D printing, blockchain technologies and artificial intelligence. The demand for simplification and transparency in information management and for the rationalization and optimization of very fragmented and splintered processes is a key driver for digitization. The book describes the contribution of the ABC Department of the Polytechnic University of Milan (Politecnico di Milano) to R&D activities regarding methods and ICT tools for the interoperable management of the different phases of the building process, including design, construction, and management. Informative case studies complement the theoretical discussion. The book will be of interest to all stakeholders in the building process - owners, designers, constructors, and faculty managers - as well as the research sector.
