*Process Engineering and Industrial Management* Jean-Pierre Dal Pont, 2013-03-04 Process Engineering, the science and art of transforming raw materials and energy into a vast array of commercial materials, was conceived at the end of the 19th Century. Its history in the role of the Process Industries has been quite honorable, and techniques and products have

contributed to improve health, welfare and quality of life. Today, industrial enterprises, which are still a major source of wealth, have to deal with new challenges in a global world. They need to reconsider their strategy taking into account environmental constraints, social requirements, profit, competition, and resource depletion. "Systems thinking" is a prerequisite from process development at the lab level to good project management. New manufacturing concepts have to be considered, taking into account LCA, supply chain management, recycling, plant flexibility, continuous development, process intensification and innovation. This book combines experience from academia and industry in the field of industrialization, i.e. in all processes involved in the conversion of research into successful operations. Enterprises are facing major challenges in a world of fierce competition and globalization. Process engineering techniques provide Process Industries with the necessary tools to cope with these issues. Drawing on linguistic concepts from 16 languages from Asia, Africa, the Arab world, and South America, the essays in the volume explore the entailments of words while discussing their conceptual implications for the humanities and the social sciences everywhere. The essays engage in the work of thinking through words to generate a conceptual vocabulary that will allow for a global conversation on social theory which will be necessarily multilingual. With essays by scholars, across generations, and from a variety of disciplines - history, anthropology, and philosophy to literature and political theory - this book will be essential reading for scholars, researchers, and students of critical theory and the social sciences.

*Queering the Renaissance* Jonathan Goldberg, 1994 *Queering the Renaissance* offers a major reassessment of the field of Renaissance studies. Gathering essays by sixteen critics working within the perspective of gay and lesbian studies, this collection redraws the map of sexuality and gender studies in the Renaissance. Taken together, these essays move beyond limiting notions of identity politics by locating historically forms of same-sex desire that are not organized in terms of modern definitions of homosexual and heterosexual. The presence of contemporary history can be felt throughout the volume, beginning with an investigation of the uses of Renaissance precedents in the 1986 U.S. Supreme Court decision *Bowers v. Hardwick*, to a piece on the foundations of 'our' national imaginary, and an afterword that addresses how identity politics has shaped the work of early modern historians. The volume examines canonical and noncanonical texts, including highly coded poems of the fifteenth-century Italian poet Burchiello, a tale from Marguerite de Navarre's *Heptameron*, and Erasmus's letters to a young male acolyte. English texts provide a central focus, including works by Spenser, Shakespeare, Bacon, Donne, Beaumont and Fletcher, Crashaw, and Dryden. Broad surveys of the complex terrains of friendship and sodomy are explored in one essay, while another offers a cross-cultural reading of the discursive sites of lesbian desire. Contributors.
