Processing of Environmental Information in Vertebrates Milton H. Stetson, 2012-12-06 In just one concise and lucidly written volume a multitude of topics is covered introducing the results of extensive research on the processing of environmental information in vertebrates. Practical examples are provided to illustrate points made in the text. Many factors, both from the external environment and from within the animals own cells or tissue makeup can directly serve as a pressure to elicit physiological and/or behavioral responses in the organisms studied. Light intensity, photoperiod, circadian rhythms, seasonal variation and daylength, just to name a few, are among the environmental factors that are correlated in these studies to behavioral or hormonal changes, organ function, and reproduction. This work will serve as a guidebook and easy reference source for students and research professionals in physiology, endocrinology, comparative zoology, and veterinary science.

High Magnetic Fields Fritz Herlach, 2006 This three-volume book provides a comprehensive review of experiments in very strong magnetic fields that can only be generated with very special magnets. The first volume is entirely devoted to the technology of laboratory magnets: permanent, superconducting, high-power water-cooled and hybrid; pulsed magnets, both nondestructive and destructive (megagauss fields). Volumes 2 and 3 contain reviews of the different areas of research where strong magnetic fields are an essential research tool. These volumes deal primarily with solid-state physics; other research areas covered are biological systems, chemistry, atomic and molecular physics, nuclear resonance, plasma physics and astrophysics (including QED).

A Lifetime of Communication Julie Yingling, 2004-07-21 A Lifetime of Communication explores the developmental processes that make for uniquely human change and growth. In this distinctive work, author Julie Yingling utilizes a single case example of a child, her parents, and other influential figures to demonstrate developmental interaction and transformational life events. Using relational and dialogic perspectives, Yingling follows the child from infancy into

adolescence and adulthood, through the stages which the child acquires the means to communicate, to form and develop through relationships, to build human cognitive processes, and to understand the self as a responsible part of the social world. The work presents traditional and cutting-edge developmental theories as well as current research and relational perspectives in a palatable framework, employing a case example from a person's life at the start of each content chapter. Yingling examines communication and cognition in the various stages of human development, making connections between communication, relationships, and maturation. She also distinguishes the biological and physiological portions of development from those that are relational and self-directed. She concludes the volume with a summary of relational dialogical theory and a discussion of the implications of this perspective of development-both for the future of communication study and for personal growth. This monograph offers many new insights to scholars in human development, relationships, family studies, social psychology, and others interested in communication and relationships across the life span. It is also appropriate for advanced undergraduate and graduate courses in relationships, developmental communication, and relational communication.

The Welfare of Pigs Jeremy N. Marchant-Forde, 2008-11-26 The domestic pig is perceived as an animal with intelligence and character and yet, in the industrialized world, the majority of people have had little or no contact with them. Pigs are subject to a wide range of environments from the tropics to the sub-arctic, ranging from small-scale, extensive systems to large-scale intensive systems. They may spend their whole life on one farm or may be subject to long-distance transport multiple times. Not surprisingly, many aspects of their life experiences can impact their welfare. This book brings together a team of leading pig welfare research scientists to review the natural history of the pig, the welfare of pigs at different stages of life and to indicate what the future holds in terms of pig welfare. The text is aimed at researchers and teachers working in veterinary and animal science together with those working in the pig industry and for governmental and non-governmental animal welfare organizations.

Fish Welfare Edward J. Branson, 2008-04-30 Fish have the same stress response and powers of nociception as mammals.

Their behavioural responses to a variety of situations suggest a considerable ability for higher level neural processing – a level of consciousness equivalent perhaps to that attributed to mammals. Each chapter of this book has been written by specialists in their field. The subject matter is wide ranging and covers in detail concepts of animal welfare in addition to more specific aspects of fish welfare. Philosophical concepts of welfare are discussed along with more practical areas of fish welfare encompassing all husbandry and management activities that have a potential to affect the welfare of the fish in our care. This book is an essential purchase for fish veterinarians, fish farmers, fish biologists and those involved in the aquaculture industry and its regulation.

Digital Technologies and Generational Identity Sakari Taipale, Terhi-Anna Wilska, Chris Gilleard, 2017-07-28 The short lifetime of digital technologies means that generational identities are difficult to establish around any particular technologies let alone around more far-reaching socio-technological ‘revolutions’. Examining the consumption and use of digital technologies throughout the stages of human development, this book provides a valuable overview of ICT usage and generational differences. It focuses on the fields of home, family and consumption as key arenas where these processes are being enacted, sometimes strengthening old distinctions, sometimes creating new ones, always embodying an inherent restlessness that affects all aspects and all stages of life. Combining a collection of international perspectives from a range of fields, including social gerontology, social policy, sociology, anthropology and gender studies, *Digital Technologies and Generational Identity* weaves empirical evidence with theoretical insights on the role of digital technologies across the life course. It takes a unique post-Mannheimian standpoint, arguing that each life stage can be defined by attitudes towards, and experiences of, digital technologies as these act as markers of generational differences and identity. It will be of particular value to academics of social policy and sociology with interests in the life course and human development as well as those studying media and communication, youth and childhood studies, and gerontology.
