**I Got Something to Say** Matthew Oware, 2018-07-11 What do millennial rappers in the United States say in their music? This timely and compelling book answers this question by decoding the lyrics of over 700 songs from contemporary rap artists. Using innovative research techniques, Matthew Oware reveals how emcees perpetuate and challenge gendered and racialized constructions of masculinity, femininity, and sexuality. Male and female artists litter their rhymes with misogynistic and violent imagery. However, men also express a full range of emotions, from arrogance to vulnerability, conveying a more complex manhood than previously acknowledged. Women emphatically state their desires while embracing a more feminist approach. Even LGBTQ artists stake their claim and express their sexuality without fear. Finally, in the age

of Black Lives Matter and the presidency of Donald J. Trump, emcees forcefully politicize their music. Although complicated and contradictory in many ways, rap remains a powerful medium for social commentary.

Digital Literacies and Interactive Media Earl Aguilera,2022-08-19 This text responds to changing literacy practices in the digital age by developing an interdisciplinary framework for analysis of digital content created by students. Drawing on scholarship that expands traditional understandings of literacy to account for new ways in which students engage with interactive text and media, Aguilera develops a methodological toolkit for formal analysis of multimodal representations. This book frames the central challenges faced by researchers entering the field of digital literacy studies, presents a nuanced discussion of digital mediation, and brings these topics to life in the case study of a Code Club, a library-based computer programming club for elementary, middle, and high school students. The three-dimensional framework, which offers a schema for analysis of multimodal content, computational procedures, and contextual factors involved in the creation and interpretation of digital content, serves as a much-needed framework for the critical analysis of digital multimodal composition. This text will benefit researchers, academics, and educators in the areas of language and literacy, multimodality, and technology and digital innovation in education.

Pardo,2022-01-01 This is the first of three volumes in the Ion Channels & Transporters in Tumor Biology collection, which discusses the function of ion transport proteins in cellular and systemic homeostasis. The authors highlight the role of the so-called transportome, which is defined by the entirety of ion transporters and ion channels. Thereby, readers will get a better understanding of the impact dysregulated ion transport has on the whole spectrum of cancer types. Cancers display deficiencies in several, sometimes interdependent members of the transportome. Clinicians will be interested in the fact that controlled expression of ion transport proteins dramatically impacts the life span of cancer patients, as shown in recent studies. These observations offer a promising outlook for biomedical scientists, as members of the transportome could be the tumor markers of tomorrow - both for diagnostic and therapeutic purposes. As part of a three-volume collection, this book will fascinate members of the active research community, as well as clinicians from the cancer field.

**Almost Perfect** Joe Cox,2017-02-01 The rich, poignant tales of major league baseball's most hard-luck fraternity—the pitchers of its Almost-Perfect Games From 1908 to 2015, there have been thirteen pitchers who have begun Major League Baseball games by retiring the first twenty-six opposing batters, but then, one out from completing a perfect game, somehow faltering (or having perfection stolen from them). Three other pitchers did successfully retire twenty-seven batters in a row, but are still not credited with perfect games. While stories of pitching the perfect game have been told and retold, Almost Perfect looks at how baseball, at its core, is about heartbreak, and these sixteen men are closer to what baseball really is, and why we remain invested in the sport. Author Joe Cox visits this notion through a century of baseball and through these sixteen pitchers—recounting their games in thrilling fashion, telling the personal stories of the fascinating (and very human) baseball figures involved, and exploring the historical American and baseball backdrops of each flawed gem. From George “Hooks” Wiltse's nearly perfect game in 1908 to “Hard Luck” Harvey Haddix's 12-inning, 36-consecutive-outs performance on May 26, 1959 (the most astounding single-game pitching performance in baseball history) to Max Scherzer's near miss in 2015, Joe Cox's book captures the action, the humanity, and the history of the national pastime's greatest “almosts.”

**Innovation in Clusters** Estelle Vallier,2021-11-30 Forged at the heart of international political bodies by expert researchers, the innovation cluster concept has been incorporated into most public policies in industrialized countries. Based largely on the ideas behind the success of Silicon Valley, several imitative attempts have been made to geographically group laboratories, companies and training in particular fields in order to generate "synergies" between science and industry. In its first part, *Innovation in Clusters* analyzes the infatuation with the system of clusters that is integral to innovative policies by analyzing its socio historical context, its revival in management and its worldwide expansion, looking at a French example at

a local level. In its second part, the book explores a specialized biotechnology cluster dating back to the end of the 1990s. The sociological survey conducted twenty years later sheds a different light on the dynamics and relationships between laboratories and companies, contradicting the commonly held belief that innovation is made possible by geographical proximity.

A Minimal Metaphysics for Scientific Practice Andreas Hüttemann,2021-07-01 What are the metaphysical commitments which best 'make sense' of our scientific practice (rather than our scientific theories)? In this book, Andreas Hüttemann provides a minimal metaphysics for scientific practice, i.e. a metaphysics that refrains from postulating any structure that is explanatorily irrelevant. Hüttemann closely analyses paradigmatic aspects of scientific practice, such as prediction, explanation and manipulation, to consider the questions whether and (if so) what metaphysical presuppositions best account for these practices. He looks at the role which scientific generalisation (laws of nature) play in predicting, testing, and explaining the behaviour of systems. He also develops a theory of causation in terms of quasi-inertial processes and interfering factors, and he proposes an account of reductive practices that makes minimal metaphysical assumptions. His book will be valuable for scholars and advanced students working in both philosophy of science and metaphysics.
