The Need Helen Phillips, 2019-07-09 ***LONGLISTED FOR THE NATIONAL BOOK AWARD IN FICTION*** Named one of Time Magazine's 100 Best Mystery and Thriller Books of All Time "An extraordinary and dazzlingly original work from one of our most gifted and interesting writers" (Emily St. John Mandel, author of *The Glass Hotel*). *The Need*, which finds a mother

of two young children grappling with the dualities of motherhood after confronting a masked intruder in her home, is “like nothing you’ve ever read before...in a good way” (People). When Molly, home alone with her two young children, hears footsteps in the living room, she tries to convince herself it’s the sleep deprivation. She’s been hearing things these days. Startling at loud noises. Imagining the worst-case scenario. It’s what mothers do, she knows. But then the footsteps come again, and she catches a glimpse of movement. Suddenly Molly finds herself face-to-face with an intruder who knows far too much about her and her family. As she attempts to protect those she loves most, Molly must also acknowledge her own frailty. Molly slips down an existential rabbit hole where she must confront the dualities of motherhood: the ecstasy and the dread; the languor and the ferocity; the banality and the transcendence as the book hurtles toward a mind-bending conclusion. In *The Need*, Helen Phillips has created a subversive, speculative thriller that comes to life through blazing, arresting prose and gorgeous, haunting imagery. “Brilliant” (Entertainment Weekly), “grotesque and lovely” (The New York Times Book Review, Editor’s Choice), and “wildly captivating” (O, The Oprah Magazine), *The Need* is a glorious celebration of the bizarre and beautiful nature of our everyday lives and “showcases an extraordinary writer at her electrifying best” (Publishers Weekly, starred review).

The S Files Rebecca Linam,2015-04-25 Warning!!! What you are about to read is a complete and truthful account of the world of espionage. Forget everything you thought you knew about spies. What you thought you knew is totally wrong. For example, did you know that... *...the Russian Spy Agency employed seven-year-old spies? *...the American Spy Agency's top scientist, Dr. Pepper, cloned its most successful agents? *...the Japanese Spy Agency developed a type of cheese that boosted its agents' success rates by up to 25%? *...the Spanish Spy Agency invented its famous tickle torture? *...the Flemish Spy Agency uncovered a Martian plot to take over the world? *...the Phlegmish Spy Agency was responsible for many major flu outbreaks during the Cold War? You might also think that backwards Russian pig-Latin is not a real spy code, but it's listed in the Russian Spy Agency handbook. This book explains how it really happens. This is spying in its true, exposed form. (This

book will self-destruct when you finish reading it.)

The Life of Ian Fleming John Pearson, 2011-12-01 From the author of *All the Money in the World* and *The Profession of Violence* comes the definitive biography of James Bond's creator, Ian Fleming. It is now over fifty years since the premiere of *Dr No*, the very first Bond film, with Sean Connery introducing 007 as the glamorous secret agent who would become the single most profitable movie character in the history of cinema. But James Bond was invented by one man, Ian Fleming, a wartime intelligence officer and Sunday Times newspaper man who lived to see only the very beginning of the Bond cult. Pearson, who worked with Fleming at the Sunday Times, based this biography on his own memories of Fleming, on Fleming's private papers, and on a series of interviews with an extraordinary collection of Fleming's contemporaries - family, friends, enemies, teachers, colleagues, mistresses, and former spies from around the world. First published in 1966, John Pearson's famous biography remains the definitive account of how only Ian Fleming could have dreamed up James Bond, for he led a life as colourful as anything in his fiction, which in turn became a covert autobiography. Charming, debonair and a ruthless womaniser, globetrotting from wartime Algiers to beachside Jamaica, Fleming was as elusive and opaque as his imaginary creation. In his new introduction to this edition, Pearson examines the extent to which Fleming's character informs the movie portrayals of Bond, from Sean Connery through to Daniel Craig, and how Bond himself has achieved immortality beyond Fleming's wildest dreams.

Druggable Lipid Signaling Pathways Yasuyuki Kihara, 2020-09-07 Lipids are responsible not just for constituting cellular membrane but also for storing energy, transducing signaling, and modifying proteins. Bioactive lipids, or lipid mediators, transduce signaling as intracellular messenger like phosphoinositides, and also regulate cell-cell communication through G protein-coupled receptors (GPCRs) that are potentially valuable drug targets in many diseases. Until now, about 40 GPCRs within ~300 rhodopsin-like (class A) GPCRs, are identified as lipid GPCRs. Advances of lipid research have enabled to develop novel small molecules targeting lipid GPCRs for several diseases. Most notably, fingolimod (FTY720), a sphingosine 1-phosphate (S1P) receptor modulator, became the first FDA-approved medicine as an orally bioavailable drug for treating relapsing forms of multiple sclerosis (MS). In addition to fingolimod, other drugs targeting lipid GPCRs had been developed such as latanoprost (prostaglandin F_{2a} analogue, used for ocular hypertension and glaucoma), epoprostenol and treprostinil (prostaglandin I₂ analogue, used for pulmonary arterial hypertension), montelukast and pranlukast (cysteinyl leukotriene receptor antagonist, used for asthma and allergies), etc. Novel drugs are also expected like lysophosphatidic acid (LPA) receptor antagonist for treatment of pulmonary fibrosis. Drug development targeting lipid signalling pathways are backdated to more than a century, when aspirin was synthesized and selling by Bayer, while the basic mechanism of aspirin's effects (block prostanoid synthesis by inhibiting cyclooxygenases) had not been discovered until 1970s. Nowadays, non-

steroidal anti-inflammatory drugs (NSAIDs) like aspirin and ibuprofen are commonly used as antipyretic analgesics and available readily over-the-counter oral drugs. Both upstream and downstream enzymes, such as phospholipase A2s and prostaglandin E synthases, respectively, are also potential therapeutic targets for inflammatory diseases. Recent studies of lipid metabolism expand the lipid biology field from pro-inflammatory lipid mediators to anti-inflammatory epoxy fatty acids (epoxyeicosatrienoic acids), and also omega-3 fatty acid-derived pro-resolving lipid mediators (lipoxin, resolvin, and neuroprotectin). These bioactive lipids, their metabolic pathways and receptors are of great interest in developing next-generation anti-inflammatory and pro-resolving drugs for a wide variety of diseases including. This book summarizes not only historical overview of lipid signaling pathways but also provides summary of cutting-edge studies that may provide some hints of novel “druggable” lipid signaling targets.

The focus is primarily on a collection of characters whose professional and personal lives frequently collide. When Vanessa, a thirty-something psychiatrist, reveals to the audience, in "Manipulation," that the mind is a "fascinating tool," Peter, her married patient, conjures up images of infidelity and acts out his erotic feelings toward her in therapy. Vanessa finds him difficult to resist. But their exchange flips from romantic to adversarial as Peter reveals his desire to end his affair because his wife is pregnant. In "Love," Taylor, a successful lawyer "who has her life in order," struggles to find one meaningful relationship that will ignite her passionless life.
