Food52 Mighty Salads Editors of Food52,2017-04-11 A collection of 60 recipes for turning ordinary salads into one-dish worthy meals. Does anybody need a recipe to make a salad? Of course not. But if you want your salad to hold strong in your lunch bag or carry the day as a one-bowl dinner, dressing on lettuce isn't going to cut it. Make way for Mighty Salads, in which the editors of Food52 present sixty salads hefty with vegetables, meats, grains, beans, fish, seafood, pasta, and bread. Think shrimp and radicchio tossed in a bacon vinaigrette, a make-ahead jumble of white beans with charred lemon and fennel, slow-roasted duck and apples scattered across spicy greens. It's comforting food made captivating by simply charring one ingredient or marinating another—shaving some, or roasting a bunch. But because we don't always follow recipes, there are also loose formulas for confident off-roading, as well as back-pocket tips and genius tricks for improving any old salad. Because once you know how to fix too-salty dressing, wash greens once and for all, keep an avocado from browning, and even sprout your own grains, the humble salad starts looking a lot more interesting—and a whole lot more like dinner.

Biochar for Environmental Management Johannes Lehmann,Stephen Joseph,2012-05-16 Biochar is the carbon-rich product when biomass (such as wood, manure or crop residues) is heated in a closed container with little or no available air. It can be used to improve agriculture and the environment in several ways, and its stability in soil and superior nutrient-retention properties make it an ideal soil amendment to increase crop yields. In addition to this, biochar sequestration, in combination with sustainable biomass production, can be carbon-negative and therefore used to actively remove carbon dioxide from the atmosphere, with major implications for mitigation of climate change. Biochar production can also be combined with bioenergy production through the use of the gases that are given off in the pyrolysis process. This book is the first to synthesize the expanding research literature on this topic. The book's interdisciplinary approach, which covers engineering, environmental sciences, agricultural sciences, economics and policy, is a vital tool at this stage of biochar technology development. This comprehensive overview of current knowledge will be of interest to advanced students, researchers and professionals in a wide range of disciplines.

The Gentle Art of Swedish Death Cleaning Margareta Magnusson, 2018-01-02 *The basis for the wonderfully funny and moving TV series developed by Amy Poehler and Scout Productions* A charming, practical, and unsentimental approach to putting a home in order while reflecting on the tiny joys that make up a long life. In Sweden there is a kind of decluttering called *döstädning*, *dö* meaning "death" and *städning* meaning "cleaning." This surprising and invigorating process of clearing out unnecessary belongings can be undertaken at any age or life stage but should be done sooner than later, before others

have to do it for you. In *The Gentle Art of Swedish Death Cleaning*, artist Margareta Magnusson, with Scandinavian humor and wisdom, instructs readers to embrace minimalism. Her radical and joyous method for putting things in order helps families broach sensitive conversations, and makes the process uplifting rather than overwhelming. Margareta suggests which possessions you can easily get rid of (unworn clothes, unwanted presents, more plates than you'd ever use) and which you might want to keep (photographs, love letters, a few of your children's art projects). Digging into her late husband's tool shed, and her own secret drawer of vices, Margareta introduces an element of fun to a potentially daunting task. Along the way readers get a glimpse into her life in Sweden, and also become more comfortable with the idea of letting go.
