Advances in Artificial Intelligence Marie-Jean Meurs, Frank Rudzicz, 2019-05-21 This book constitutes the refereed proceedings of the 32nd Canadian Conference on Artificial Intelligence, Canadian AI 2019, held in Kingston, ON, Canada, in May 2019. The 27 regular papers and 34 short papers presented together with 8 Graduate Student Symposium papers and 4 Industry Track papers were carefully reviewed and selected from 132 submissions. The focus of the conference was on artificial intelligence research and advanced information and communications technology.

The Technical Collection of Intelligence Robert M. Clark, 2010-07-15 Technical collection represents the largest asymmetric edge that technologically advanced countries such as the United States and its allies have in the intelligence business. Intelligence veteran Robert M. Clark's new book offers a succinct, logically organized, and well written overview of technical collection, explained at a non technical level for those new to the field. Filling a void in the literature, The Technical Collection of Intelligence is the only book that comprehensively examines the collection, processing, and exploitation of non-literal intelligence information, including laser, acoustic, and infrared signals; non-imaging optical intelligence sources; and radar tracking and measurement of aerospace vehicles. A compelling final chapter addresses the substantial challenges that come with managing technical collection. A stunning full-color interior design features high quality graphics while a handy "tabs" feature keeps content at the ready. A useful list of recommended books and reports, a glossary of terms, and a list of acronyms make this guide a go-to resource. Technical Collection will prove invaluable to all source analysts, managers of technical collection, customers of intelligence, and recruiters for the intelligence community.

Magnetic Resonance Image Reconstruction Mehmet Akcakaya, Mariya Ivanova Doneva, Claudia Prieto, 2022-11-04 Magnetic Resonance Image Reconstruction: Theory, Methods and Applications presents the fundamental concepts of MR image reconstruction, including its formulation as an inverse problem, as well as the most common models and optimization methods for reconstructing MR images. The book discusses approaches for specific applications such as non-Cartesian imaging, under sampled reconstruction, motion correction, dynamic imaging and quantitative MRI. This unique resource is

suitable for physicists, engineers, technologists and clinicians with an interest in medical image reconstruction and MRI. - Explains the underlying principles of MRI reconstruction, along with the latest research - Gives example codes for some of the methods presented - Includes updates on the latest developments, including compressed sensing, tensor-based reconstruction and machine learning based reconstruction

Nursing the Image Julia Hallam,2012-12-06 Ideas of 'nursing' and 'nurses' carry a powerful social charge. The image of the nurse continues to be a symbol of caring and of duty at the same time as it projects a view of femininity, 'stereotypical' in its gender relations. How has this image come to be constructed? An empirical investigation of representations of nursing practices in Britain focusing on publicity and promotional materials and their relationship to popular fictional narratives reveals a strong correlation between what are usually described as discrete forms of signification. Recruitment images, provide an important source of information and inspiration for those considering nurse training. Julia Hallam, draws from a wide range of sources including biographies, marketing and recruitment literature, popular fiction and film to explore this question. In doing so she makes an original contribution to the debates surrounding gender and occupational identity. The book will provide a valuable resource for undergraduate and postgraduate students on courses such as the social history of nursing, the understanding of health and illness, women's studies, gender studies and sociology courses.

Electronic String Art Stephen Erfle,2024-02-20 String art is a well-known and popular activity that uses string, a board, and nails to produce artistic images (although there are variations that use different modalities). This activity is beloved because simple counting rules are used to create beautiful images that can both adorn walls and excite young minds. The downside of this highly tactile activity is that it is quite time-consuming and rigid. By contrast, electronic string art offers much more flexibility to set up or change nail locations and counting rules, and the images created from those changes change instantaneously. *Electronic String Art: Rhythmic Mathematics* invites readers to use the author's digital resources available on the ESA website to play with the parameters inherent in string art models while offering concise, accessible explanations of the underlying mathematical principles regarding how the images were created and how they change. Readers will have the opportunity to create visually beautiful works of art while learning concepts from geometry, number theory, and modular arithmetic from approximately 200 short-interdependent sections. Features Readers are able to drill-down on images in order to understand why they work using short (1 to 2 page) stand-alone sections Sections are lessons that were created so that they could be digested in a single sitting These sections are stand-alone in the sense that they need not be read sequentially but can be referred to based on images that the reader finds interesting An open-ended, inherently flexible teaching resource for elementary, middle, and high school-level mathematics The most mathematically challenging sections (or portions of a section) are designated MA and may not be accessible to elementary and middle school readers Will be appreciated by anyone interested in recreational mathematics or mathematical artworks even if the users are not

interested in the underlying mathematics Includes exercises, solutions, and many online digital resources These QR codes take you to these digital resources. One takes you directly to the web version of the string art model (used as a starting point for teaching the parameters of the model in Section 25.5). The other takes you to the ESA web page with additional links to a variety of resources.

Language and Culture in the Intercultural World Vesna Mikolič,2020-12-09 The intensification of contacts between cultures and languages has a major impact on all social spheres today. Multiculturalism and multilingualism are important elements of the local, regional, national and global community. Much of the world's conflict stems from the contrast between globalization and nationalism, fuelled by religions, racial divisions, traditions and other cultural particularities. Focusing mainly on the situation in Central and South-eastern Europe, this book addresses how cultural identities develop through tourism, education, literature and other social fields, and how language and literature teaching should be planned in this context. It consists of the following sections: Language, Culture and Tourism; Interculturalism, Multilingualism and Approaches to Language Learning; and Culture in Literature and Translation. The volume will be of interest to teachers and researchers of cultural and tourism studies, linguistics and language learning, literary studies and translation, while also addressing wider readers interested in contemporary intercultural society.

Smartphone Microstock ,2016-05-16 With an eye toward profiting from their camera-phone skills, photographers are submitting "microstock" images to stock photography companies; these Internet-based photo agencies accept royalty-free images from a far broader base of photographers than brick-and-mortar stock agencies. While the profits are quite low per sale those sales can really add up. In this book, Chen shows readers how to tailor their shooting approach and subject selection to meet the needs of the microstock industry. From camera settings to accessory and software selection, Chen shows readers how to choose and use the tools they need to create high-caliber image results. Next, he offers photographers tips for getting through the microstock submissions process and putting their images in front of a viewing audience. He introduces a host of tools for processing images for enhanced impact, as well. Tips and images from other professional photographers round out this one-of-a-kind, heavily illustrated book.

The World Atlas of Tattoo Anna Felicity Friedman,James Elkins,2015-01-01 A grand tour of the world's great tattoos--Atlas Obscura This book--part global art historical tome, part coffee-table book of visual wonders--is a valuable corrective to many silly things that we assume about tattooing.--The New Republic A lavishly illustrated global exploration of the vast array of styles and most significant practitioners of tattoo from ancient times to today Tattoo art and practice has seen radical changes in the 21st century, as its popularity has exploded. An expanding number of tattoo artists have been mining the past for lost traditions and innovating with new technology. An enormous diversity of styles, genres, and techniques has emerged, ranging from geometric blackwork to vibrant, painterly styles, and from hand-tattooed works to machine-produced

designs. With over 700 stunning color illustrations, this volume considers historical and contemporary tattoo practices in Europe, the Americas, the Middle East, North and Sub-Saharan Africa, Asia, Australia, and the Pacific Islands. Each section, dedicated to a specific geographic region, features fascinating text by tattoo experts that explores the history and traditions native to that area as well as current styles and trends. The World Atlas of Tattoo also tracks the movement of styles from their indigenous settings to diasporic communities, where they have often been transformed into creative, multicultural, hybrid designs. The work of 100 notable artists from around the globe is showcased in this definitive reference on a widespread and intriguing art practice.

WebGL Programming Guide Kouichi Matsuda, Rodger Lea, 2013 With this book, students will learn step-by-step, through realistic examples, building their skills as they move from simple to complex solutions for building visually appealing web pages and 3D applications with WebGL. Media, 3D graphics, and WebGL pioneers Dr. Kouichi Matsuda and Dr. Rodger Lea offer easy-to-understand tutorials on key aspects of WebGL, plus 100 downloadable sample programs, each demonstrating a specific WebGL topic. Students will move from basic techniques such as rendering, animating, and texturing triangles, all the way to advanced techniques such as fogging, shadowing, shader switching, and displaying 3D models generated by Blender or other authoring tools. This book won't just teach WebGL best practices, it will give a library of code to jumpstart projects.

It includes content from the following Packt products: 1) Ubuntu Server Cookbook 2) CentOS 7 Linux Server Cookbook, Second Edition 3) Red Hat Enterprise Linux Server Cookbook Style and approach This easy-to-follow practical guide contains hands on examples and solutions to real world administration problems and problems faced when building your RHEL 7 system from scratch using orchestration tools.

Paraconsistent Intelligent-Based Systems Jair Minoro Abe, 2015-06-22 This book presents some of the latest applications of new theories based on the concept of paraconsistency and correlated topics in informatics, such as pattern recognition (bioinformatics), robotics, decision-making themes, and sample size. Each chapter is self-contained, and an introductory chapter covering the logic theoretical basis is also included. The aim of the text is twofold: to serve as an introductory text on the theories and applications of new logic, and as a textbook for undergraduate or graduate-level courses in AI. Today AI frequently has to cope with problems of vagueness, incomplete and conflicting (inconsistent) information. One of the most notable formal theories for addressing them is paraconsistent (paracomplete and non-alethic) logic.

Computer Vision - ACCV 2022 Lei Wang, Juergen Gall, Tat-Jun Chin, Imari Sato, Rama Chellappa, 2023-03-10 The 7-volume set of LNCS 13841-13847 constitutes the proceedings of the 16th Asian Conference on Computer Vision, ACCV 2022, held in Macao, China, December 2022. Persuasive Technology Yvonne de Kort, Wijnand IJsselsteijn, Cees Midden, Berry Eggen, B.J. Fogg, 2007-11-24 This book constitutes the thoroughly refereed post-proceedings of the Second International Conference on Persuasive Technology for Human Well-Being, PERSUASIVE 2007, held in Palo Alto, CA, USA, in April 2007. The 37 revised full papers presented were carefully reviewed and selected from numerous submissions for inclusion in the book. The papers are organized in topical sections and cover a broad range of subjects.

A new hybrid filtering technique for minimization of over-filtering issues in ultrasound images Sumit Kushwaha, Rabindra Kumar Singh, In this paper, a new hybrid filter technique is proposed by combining Anisotropic Diffusion (AD) with Butterworth band pass filter to overcome the over-filtering of the image. In addition, the performance of the proposed hybrid filter and its design parameters are enhanced by using Particle Swarm Optimization (PSO) algorithm. The simulation results show that the proposed filtering technique achieves a better denoising performance on comparisons with other filtering techniques in terms of PSNR, SNR, SSIM, and EPI.

The Scientific Image Bas C. Van Fraassen, 1980-12-11 The aim of *The Scientific Image* is to develop an empiricist alternative to both logical positivism and scientific realism. Against positivism, the author insists on a literal interpretation of the language of science, and on an irreducibly pragmatic dimension of theory acceptance. Against realism he argues that the central aim of science is empirical adequacy, and that the only belief involved in the acceptance of a scientific theory is belief

that the theory fits the observable phenomena. To substantiate this, the book presents three mutually supporting theories concerning science. The first is an account of the relation between a scientific theory and the empirical world. The second is a new theory of explanation and why-questions, according to which the explanatory power of a theory is a pragmatic aspect which goes beyond its empirical import, but which provides no additional reasons for believing it. And the third is an interpretation of probability in physical theory, with reference to both classical and quantum physics. The presentation of these three central theses is preceded by two chapters which provide an informal introduction to current debates in the philosophy of science, particularly concerning scientific realism.
