Creativity in Art, Design and Technology Susan Liggett, Rae Earnshaw, Jill Townsley, 2023-03-31 This is an open access book. Creativity is a difficult concept, how can it best be defined, understood, applied, and practiced? This book provides

important answers to these questions. Technology can enable artists to be more creative. Scientific and artistic thinking give us two complementary tools to understand the complexity of the world, with science reducing subjective experience to essential principles and art intensifying and expanding our experiences. These examples also show how artists can push the boundaries of technology into exciting new realms that have not been explored before. The impact that art and art practice can have on culture, society, and social responsibility is explored in detail through examples and case studies. In addition, the book presents how artists are creating and reflecting cultural and societal resonance in their work. Can other disciplines help artists to be more creative? All are part of an interrelated wider society and enables artists to develop artwork fit for highly interfaced and conceptually broad contemporary contexts. This is illustrated with examples which show exciting and challenging results. Creativity in Art, Design and Technology is relevant for artists, designers, scientists and technologists. All can benefit in a major way from a greater understanding of creativity, and the ways in which mutual interaction and collaboration enables all areas to develop. The potential for the future is immense and this book signposts the way forward.

Systemic Circular Economy Solutions for Fiber Reinforced Composites Marcello Colledani, Stefano Turri, 2022 This open

access book provides an overview of the work undertaken within the FiberEUse project, which developed solutions enhancing the profitability of composite recycling and reuse in value-added products, with a cross-sectorial approach. Glass and carbon fiber reinforced polymers, or composites, are increasingly used as structural materials in many manufacturing sectors like transport, constructions and energy due to their better lightweight and corrosion resistance compared to metals. However, composite recycling is still a challenge since no significant added value in the recycling and reprocessing of composites is demonstrated. FiberEUse developed innovative solutions and business models towards sustainable Circular Economy solutions for post-use composite-made products. Three strategies are presented, namely mechanical recycling of short fibers, thermal recycling of long fibers and modular car parts design for sustainable disassembly and remanufacturing. The validation of the FiberEUse approach within eight industrial demonstrators shows the potentials towards new Circular Economy value-chains for composite materials.

Proceedings of the 2nd International Conference on Culture, Design and Social Development (CSDS 2022)

Mohd Fauzi bin Sedon M. Dom, Peter Thomas Zabielskis, Xudong Liu, Xiao Liu, 2023-03-02 This is an open access book. Culture is the spiritual activity and product of human society relative to economy and politics. The traditional concept of human beings believes that culture is a social phenomenon, a product created by human beings for a long time, and at the same time a historical phenomenon, which is the accumulation of human society and history. The technical, economical and cultural nature of art design determines that only with high social and economic development can art and culture flourish. Art design is the product of the combination of art and technology. Art design is also a kind of productivity, which promotes the development of social economy. As a driving factor for social and economic development, design art will also better serve the social economy with its own more perfect operating system. The 2nd International Conference on Culture, Design and Social Development (CSDS 2022) was held in Nanjing from December 2 to 4, 2022. The purpose of the conference is to provide an international platform for experts, scholars, engineers and technicians, and technical R&D personnel engaged in related fields such as culture, design and social development, to share scientific research results, broaden research ideas, collide with new ideas, and strengthen academic research, and to explore the key challenges and research directions faced by the development of this field, and promote the industrialization cooperation of academic achievements. Experts, scholars, business people and other relevant personnel from universities and research institutions at home and abroad are cordially invited to attend and exchange.

International Conference on Urban Climate, Sustainability and Urban Design Bao-Jie He,

Concept and Design Developments in School Improvement Research Arnoud Oude Groote Beverborg,Tobias Feldhoff,Katharina Maag Merki,Falk Radisch,2021 This open access book discusses challenges in school improvement research and different methodological approaches that have the potential to foster school improvement research. Research on school improvement and accountability analysis places high demands on a study's design and method. The potential of combining the depth of case studies with the breath of quantitative measures and analyses in a mixed-methods design seems very promising. Consequently, the focus of the book lies on innovative methodological approaches. The book chapters address design, measurement, and analysis developments as well as theoretical and conceptual developments. The relevance of the research presented in the chapters for educational accountability is discussed in the book's discussion chapter. More specifically, authors present one specific innovative methodological approach and clarify that approach with a concrete example in the context of school improvement, based on empirical data when possible. In this way, this book helps researchers designing complex useful studies.
