I Ching Allie Woo,2022-04-26 This comprehensive introduction to the I Ching explains how to unlock the secrets of this ancient form of divination. The ancient Chinese formalized nature's shapes and forms into the I Ching, or Book of Changes, which is thought to be the oldest system of divination in the world. In the pages of the I Ching, we find sixty-four types of changes covering all of life's transitions and laid out in symbol form as hexagrams and trigrams. This work explains how to follow a simple system of throwing coins to discern the appropriate symbols, then use the text and commentary and our own intuition to guide us towards certain action or knowledge. It also discusses how to use the ancient Taoist knowledge to promote self-awareness, positive health, and personal happiness.

Programmes for Animation Brian Salt,2014-05-09 Programmes for Animation: A Handbook for Animation Technicians is a handbook on animation containing a list of 57 programs for use on a programmable calculator. Each program is preceded by explanations of how the necessary mathematical formulas were derived; each step of the program is also accompanied by a brief explanation. The programs are intended for the Hewlett-Packard HP-97 calculator, and can also be used on the HP-67 pocket calculator. Comprised of 17 chapters, this book begins by giving sufficient information about the functions of the keys of the calculator. The discussion then turns to field widths and zoom counter readings; the field chart and coordinate systems; and lens and table off-sets. Subsequent chapters deal with linear movements and fairings; exponential movements; middle fairings and co-fairings; rotations and circular pans; and simple harmonic motion. Exposures at different field widths are also explained, along with zooms using several pieces of artwork and movements along a curve. The book concludes by describing two-lens aerial image projection. This monograph was written specifically for animation technicians.

Tracks to Innovation Robert L. Fleischer,1998-01-12 In the late 1950s, scientists at General Electric -- among them the author -- discovered that when mica is exposed to energetic charged particles, the particles leave latent tracks in the material. It soon turned out that glass, plastics, or certain other materials can be similarly treated. This discovery paved the way not only for a new and useful method of measuring radioactivity, it has also found widespread applications in other fields, ranging from geology and materials science to archaeology and art history. Fleischer presents the history of these developments and discusses the applications of the technique in a way that will interest anyone even with only a minimal knowledge of physics.
