The Art of Fire Daniel Hume,2017-11-02 Fire can fascinate, inspire, capture the imagination and bring families and communities together. It has the ability to amaze, energise and touch something deep inside all of us. For thousands of years, at every corner of the globe, humans have been huddling around fires: from the basic and primitive essentials of light, heat, energy and cooking, through to modern living, fire plays a central role in all of our lives. The ability to accurately and quickly light a fire is one of the most important skills anyone setting off on a wilderness adventure could possess, yet very little has been written about it. Through his narrative Hume also meditates on the wider topics surrounding fire and how it shapes the world around us.

Wood Protection and Preservation Christian Brischke,2020-12-10 Wood is an advantageous building material in many respects, but it is biodegradable and therefore requires protection when used in highly hazardous applications. This Special Issue comprises 19 papers by authors from 14 countries in Asia, North America and Europe. They represent a wide range of aspects related to wood protection and wood preservation, and give timely examples of research activities that can be observed around the globe. Several authors reported on the processes of thermal modification and different chemical wood modification techniques, which are among the latest alternative wood protection methods without the use of biocides. New

preservatives and assessment methods of preservative-treated wood products are presented, as well as studies on the natural durability of wood, fire-retardant treated wood, the effect of concrete on wood durability and different novel surface modification techniques using plasma. In addition to biological durability, the mechanical properties, moisture performance, bonding properties, weathering stability and the corrosiveness of differently treated wood are investigated and reported within this Special Issue. Examples of research on fungal biology, service life planning with wood and test methodology are also included and complete the Special Issue.
