Linguistic Relativity in SLA Zhaohong Han, Teresa Cadierno, 2010 Crosslinguistic influence is an established area of second language research, and as such, it has been subject to extensive scrutiny. Although the field has come a long way in understanding its general character, many issues still remain a conundrum, for example, why does transfer appear selective, and why does transfer never seem to go away for certain linguistic elements? Unlike most existing studies, which have focused on transfer at the surface form level, the present volume examines the relationship between thought and language, in particular thought as shaped by first language development and use, and its interaction with second language use. The chapters in this collection conceptually explore and empirically investigate the relevance of Slobin's thinking-for-speaking hypothesis to adult second language acquisition, offering compelling and enlightening evidence of the fundamental nature of crosslinguistic influence in adult second language acquisition. This is a landmark publication - the first to concertedly address the implications for SLA of Slobin's thinking-for-speaking hypothesis. Do processes of conceptualisation that L1s predispose speakers to affect their L2 production, and if so in what ways? Can we 're-think' for L2 speaking, and what cognitive abilities enable this? The research issues this book raises are fundamentally important for SLA theory and pedagogy alike. Peter Robinson, Professor of Linguistics and SLA, Aoyama Gakuin University, Tokyo, Japan Language affects how we think. Slobin's (1996) thinking-for-speaking hypothesis concerns the ways that native language directs speakers' attention to pick those characteristics of events that are readily encodable therein. In this impressive collection, Han and Cadierno marshal strong support for effects of native language upon second language use, i.e. for 'rethinking-for-speaking'. A must-read for anybody interested in linguistic relativity and transfer in SLA. Nick Ellis, Professor of Psychology, University of Michigan, USA

Modern Physics Canio Noce, Institute of Physics (Great Britain), 2020 Intended for science and engineering students with a background in introductory physics and calculus, this textbook creates a bridge between classical and modern physics, filling the gap between descriptive elementary texts and formal graduate textbooks. The book presents the main topics and concepts of special relativity and quantum mechanics, starting from the basic aspects of classical physics and analysing these

topics within a modern physics frame. The classical experiments that gave rise to modern physics are also critically discussed, and special emphasis is devoted to solid state physics and its relationship with modern physics. -- Prové de l'editor.

Essays on Paula Rego Maria Manuel Lisboa,2019-08-30 In these powerful and stylishly written essays, Maria Manuel Lisboa dissects the work of Paula Rego, the Portuguese-born artist considered one of the greatest artists of modern times. Focusing primarily on Rego's work since the 1980s, Lisboa explores the complex relationships between violence and nurturing, power and impotence, politics and the family that run through Rego's art. Taking a historicist approach to the evolution of the artist's work, Lisboa embeds the works within Rego's personal history as well as Portugal's (and indeed other nations') stories, and reveals the interrelationship between political significance and the raw emotion that lies at the heart of Rego's uncompromising iconographic style. Fundamental to Lisboa's analysis is an understanding that apparent opposites - male and female, sacred and profane, aggression and submissiveness - often co-exist in Rego's work in a way that is both disturbing and destabilising. This collection of essays brings together both unpublished and previously published work to make a significant contribution to scholarship about Paula Rego. It will also be of interest to scholars and students of contemporary painting, Portuguese and British feminist art, and the political and ideological aspects of the visual arts.

The Human Face of Radiocarbon Collectif,2018-12-18 This volume presents the results of a multidisciplinary research program (“Balkans 4000”) financed by the French National Research Agency (ANR) and coordinated by the editor between 2007 and 2011, when she was a member of the Maison de l’Orient et de la Méditerranée (Laboratory of Archaeology and Archaeometry). 192 new radiocarbon dates have been produced in the laboratories of Lyon, Saclay and Demokritos, from 34 archaeological sites, spanning the years from the end of the 6th to the beginning of the 3rd millennium BC. They shed light on the evolution of human settlement during the late stages of the Neolithic period in Greece and Bulgaria, and more specifically on the transition from the Neolithic to the Early Bronze Age during the “obscure” 4th millennium BC. Thirty-one scholars, archaeologists as well as radiocarbon scientists, are signing the contributions.

Organophosphorus Chemistry 2018 György Keglevich, 2020-03-05 Organophosphorus chemistry is an important discipline within organic chemistry. Phosphorus compounds, such as phosphines, trialkyl phosphites, phosphine oxides (chalcogenides), phosphonates, phosphinates and >P(O)H species, etc., may be important starting materials or intermediates in syntheses. Let us mention the Wittig reaction and the related transformations, the Arbuzov- and the Pudovik reactions, the Kabachnik-Fields condensation, the Hirao reaction, the Mitsunobu reaction, etc. Other reactions, e.g., homogeneous catalytic transformations or C-C coupling reactions involve P-ligands in transition metal (Pt, Pd, etc.) complex catalysts. The synthesis of chiral organophosphorus compounds means a continuous challenge. Methods have been elaborated for the resolution of

tertiary phosphine oxides and for stereoselective organophosphorus transformations. P-heterocyclic compounds, including aromatic and bridged derivatives, P-functionalized macrocycles, dendrimers and low coordinated P-fragments, are also of interest. An important segment of organophosphorus chemistry is the pool of biologically-active compounds that are searched and used as drugs, or as plant-protecting agents. The natural analogue of P-compounds may also be mentioned. Many new phosphine oxides, phosphinates, phosphonates and phosphoric esters have been described, which may find application on a broad scale. Phase transfer catalysis, ionic liquids and detergents also have connections to phosphorus chemistry. Green chemical aspects of organophosphorus chemistry (e.g., microwave-assisted syntheses, solvent-free accomplishments, optimizations, and atom-efficient syntheses) represent a dynamically developing field. Last, but not least, theoretical approaches and computational chemistry are also a strong sub-discipline within organophosphorus chemistry.
