China, the UN, and Human Protection Rosemary Foot,2020-05-27 Over a relatively short period of time, Beijing moved from dismissing the UN to embracing it. How are we to make sense of the People's Republic of China's (PRC) embrace of the UN, and what does its engagement mean in larger terms? This study focuses directly on Beijing's involvement in one of the most contentious areas of UN activity — human protection — contentious because the norm of human protection tips the balance away from the UN's Westphalian state-based profile, towards the provision of greater protection for the security of individuals and their individual liberties. The argument that follows shows that, as an ever-more crucial actor within the United Nations, Beijing's rhetoric and some of its practices are playing an increasingly important role in determining how this norm is articulated and interpreted. In some cases, the PRC is also influencing how these ideas of human protection are implemented. At stake in the questions this book tackles is both how we understand the PRC as a participant in shaping global order, and the future of some of the core norms which constitute that order.

Proceedings of the 2nd International Conference on Social Knowledge Sciences and Education (ICSKSE 2022) Sumarmi Sumarmi, Rajendra P. Shrestha, I Nyoman Ruja, Azmil Mohd Tayeb, Sharina Osman, 2023-02-10 This is an open access book. Each country in Southeast Asia has experienced numerous adversities, from pandemic and disasters, to inequalities and threats to democracy. Adding to these challenges, are our common experience of colonialism where its legacies still resonate in the present. Despite these challenges, Southeast Asia continue to participate in global commitments geared towards

realizing sustainable development, democracy, and countervailing the imbalance global power relation. Furthermore, Southeast Asia has been the center of studies that critically examined the global power of knowledge production. Categories of 'developing, undeveloped, or third world' have been largely questioned, as these categories created more segregation and reflected Orientalist notion rather than acknowledging countries of Southeast Asia and others as a distinct entity. Under this backdrop, the conference will explore these important questions: what makes Southeast Asia resilient? Why? What brought Southeast Asia together as 'Southeast Asia'? What are the challenges for Southeast Asia today? How do we overcome them? How does Southeast Asia contest and cooperate with global powers within the international network? This conference will bring together academics, educators, activists, or even policy makers who work on Southeast Asia to discuss those questions. Experts within and outside the countries of Southeast Asia are welcome to share their research and knowledge on various issues about the region.

Introduction to Bioinformatics Anna Tramontano,2018-10-03 Guiding readers from the elucidation and analysis of a genomic sequence to the prediction of a protein structure and the identification of the molecular function, *Introduction to Bioinformatics* describes the rationale and limitations of the bioinformatics methods and tools that can help solve biological problems. Requiring only a limited mathematical and statistical background, the book shows how to efficiently apply these approaches to biological data and evaluate the resulting information. The author, an expert bioinformatics researcher, first addresses the ways of storing and retrieving the enormous amount of biological data produced every day and the methods of decrypting the information encoded by a genome. She then covers the tools that can detect and exploit the evolutionary and functional relationships among biological elements. Subsequent chapters illustrate how to predict the three-dimensional structure of a protein. The book concludes with a discussion of the future of bioinformatics. Even though the future will undoubtedly offer new tools for tackling problems, most of the fundamental aspects of bioinformatics will not change. This resource provides the essential information to understand bioinformatics methods, ultimately facilitating in the solution of biological problems.

Digital Image Processing for Ophthalmology Faraz Oloumi,Rangaraj Rangayyan,Anna Ells,2022-06-01 The monitoring of the effects of retinopathy on the visual system can be assisted by analyzing the vascular architecture of the retina. This book presents methods based on Gabor filters to detect blood vessels in fundus images of the retina. Forty images of the retina from the Digital Retinal Images for Vessel Extraction (DRIVE) database were used to evaluate the performance of the methods. The results demonstrate high efficiency in the detection of blood vessels with an area under the receiver operating characteristic curve of 0.96. Monitoring the openness of the major temporal arcade (MTA) could facilitate improved diagnosis and optimized treatment of retinopathy. This book presents methods for the detection and modeling of the MTA, including the generalized Hough transform to detect parabolic forms. Results obtained with 40 images of the

DRIVE database, compared with hand-drawn traces of the MTA, indicate a mean distance to the closest point of about 0.24mm. This book illustrates applications of the methods mentioned above for the analysis of the effects of proliferative diabetic retinopathy and retinopathy of prematurity on retinal vascular architecture.
