Multidisciplinary Aspects of Design Francesca Zanella,Giampiero Bosoni,Elisabetta Di Stefano,Gioia Laura Iannilli,Giovanni Matteucci,Rita Messori,Raffaella Trocchianesi,2023-12-30 This open access book gathers the contributions from the Design! OPEN International Conference, held in Parma, Italy in May 2022. The conference explored the multidisciplinary aspects of design starting from its dimensions: objects (design as focused on the object, on its functional and symbolic dimension, and at the same time on the object as a tool for representing cultures), processes (the designer's self-reflective moment which is focused on the analysis and on the definition of processes in various contexts, spanning innovation, social engagement, reflection on emergencies or forecasting), experiences (design as a theoretical and practical strategy aimed at facilitating experiential interactions among people, people and objects or environments), and narratives (making history, representing through different media, archiving, narrating, and exhibiting design). The contributions, which were selected by means of a rigorous international peer-review process, highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaboration among different specialists.

Founders of American Industrial Design Carroll Gantz, 2014-07-15 As the Great Depression started in 1929, several dozen creative individuals from a variety of artistic fields, including theatre, advertising, graphics, fashion and furniture design, pioneered a new profession. Responding to unprecedented public and industry demand for new styles, these artists entered the industrial world during what was called the Machine Age, to introduce modern design to the external appearance and form of mass-produced, functional, mechanical consumer products formerly not considered art. The popular designs by these

machine designers increased sales and profits dramatically for manufacturers, which helped the economy to recover; established a new profession, industrial design; and within a decade, changed American products from mechanical monstrosities into sleek, modern forms expressive of the future. This book is about those industrial designers and how they founded, developed, educated and organized today's profession of more than 50,000 practitioners.

Technology, Design and the Arts - Opportunities and Challenges Rae Earnshaw, Susan Liggett, Peter Excell, Daniel Thalmann, 2020-06-22 This open access book details the relationship between the artist and their created works, using tools such as information technology, computer environments, and interactive devices, for a range of information sources and application domains. This has produced new kinds of created works which can be viewed, explored, and interacted with, either as an installation or via a virtual environment such as the Internet. These processes generate new dimensions of understanding and experience for both the artist and the public's relationships with the works that are produced. This has raised a variety of interdisciplinary opportunities and issues, and these are examined. The symbiotic relationship between artistic works and the cultural context in which they are produced is reviewed. Technology can provide continuity by making traditional methods and techniques more efficient and effective. It can also provide discontinuity by opening up new perspectives and paradigms. This can generate new ideas, and produce a greater understanding of artistic processes and how they are implemented in practice. Tools have been used from the earliest times to create and modify artistic works. For example, naturally occurring pigments have been used for cave paintings. What has been created provides insight into the cultural context and social environment at the time of creation. There is an interplay between the goal of the creator, the selection and use of appropriate tools, and the materials and representations chosen. Technology, Design and the Arts - Opportunities and Challenges is relevant for artists and technologists and those engaged in interdisciplinary research and development at the boundaries between these disciplines.
