Sherry Petersik, John Petersik

Vintage Industrial Misha de Potestad, 2014-10-14 An exquisitely illustrated celebration of this influential style that is now at the forefront of interior design. Vintage Industrial covers the period from 1900 to 1950, which produced the raw, functional aesthetic that has become a cornerstone of modern design. The advent of the second industrial revolution created the need for a new kind of furniture to satisfy the demands of a rapidly growing workforce. Chairs, tables, lamps, and modular storage were designed from new materials to be mass-produced, stackable, and adjustable to the developing needs of brand-new industries that in turn were manufacturing the products that would define a changing society. These pieces, that inform a reclaimed style, are now highly popular among collectors and interior designers. This volume celebrates the engineers who shaped the industrial aesthetic as the unsung heroes of modern design and showcases their creations. By discovering ways to work iron and steel into functional forms, luminaries such as Bernard-Albin Gras, George Carwardine, Jean Prouvé, and Édouard-Wilfred Buquet sparked a revolution in the way we think about our built environment. Five chapters—on lighting, seating, tables, storage, and curiosities—describe the major innovations and designs from the period and include stunning photography depicting these objects in homes, workshops, factories, and warehouses. Meticulously curated, this elegant book is an informative style guide and source of inspiration for how to live with industrial design.

Regenerative Design for Sustainable Development John Tillman Lyle, 1996-11-08 Landscape Architecture Regenerative Design for Sustainable Development Winner, 1994 Merit Award for Communications, American Society of Landscape Architects Regenerative Design for Sustainable Development is nothing less than a user's manual for planet Earth that integrates the principles of ecological design with practical realities better than anything I've read. John Lyle has written the best book now available on the theory and practice of sustainability . . . essential reading for natural resource professionals, architects, planners, educators, environmentalists, and the general public. --David W. Orr, Professor and Chair Environmental Studies Program, Oberlin College. John Lyle has written a splendid book, *Regenerative Design for Sustainable Development*. It is perfectly topical; it is committed to the unity of art and science, design and planning, man and nature. It is itself exemplary, and it is a repository of exemplary adaptations. It has carried the environmental movement to a new threshold of ecological planning and design. It should be widely read and employed. --Ian L. McHarg, FASLA. In these times of widespread urban stress and regional disruption, the cogent thoughts of John Tillman Lyle on sustainable cities are on target and highly constructive. They are must reading for planning professionals and all concerned citizens. --John Ormsbee Simonds, FASLA. More designers need to broaden their horizons in the way John Lyle has put forth in this book. In general, there are far too few land planners, landscape architects, or architects who have any working procedure that approximates what sustainable design entails. This book provides important historical background and contemporary experience to help guide the way. --Pliny Fisk III, Center for Maximum Potential Building Systems. From the despoliation of our rivers and lakes by industrial runoff to the destruction of our atmosphere by sulphur emissions and CFCs, production cycles based on a one-way flow of materials and energy have pushed us to the brink of environmental collapse. It is time for a change, and in this groundbreaking book, John Tillman Lyle offers us a blueprint for implementing that change. This book provides civil engineers, architects, land development planners, and others with practical, realistic approaches to reversing this deadly course. Throughout, the emphasis is on proven regenerative practices for water use, land use, energy use, and building design. Most importantly, it provides ways to reestablish connections between people and nature, between art and science, and between technology and daily life.
